

AUDIO VISUAL SOLUTIONS FOR SYSCO CORPORATION IN CALIFORNIA

OBJECTIVE Sysco Corporation, a global leader in food distribution, needed new conference rooms, videoconferencing board rooms, as well as two-way and four-way divisible training rooms at one of its training and food distribution centers.

SOLUTION VectorUSA designed and built the custom AV solutions around Crestron Digital Media, a highly recommended AV solution that accommodates analog and digital connections with high resolution content. VectorUSA provided unique solutions for each room in the building. This project included display options, audio sound reinforcement, video conferencing, audio conferencing, permanent microphones, wired and wireless touch panels, and AV automation.

VectorUSA also designed areas for capturing and recording training sessions in the facility's customized kitchens. VectorUSA installed the Crestron Capture HD product line to allow the company to record high definition video of chefs designing, preparing, cooking, and displaying meals for their clients. Each kitchen was equipped with three HD Vaddio cameras, permanently placed to record the preparation of meals. Kitchen designs also included a waterproof, hand-held remote for rotating each camera, and executing recording sessions via a Crestron Control processor. This solution allows Sysco to provide clients with an HD video recording of each session.
