

# Managed Solutions: Professional Services, Managed Services and Consulting

## Success Story

**Supporting over 2.6 million jobs contributing \$206 billion to our GDP annually, this container terminal is a vital component of the U.S. economy.**

## Challenge

This Container Terminal Operator was in the process of building a state-of-the-art marine terminal, including the combination of two existing terminal sites within the port to create a single terminal footprint.

VectorUSA was requested to provide technology support services to help augment their current information technology staff.

Without the correct design and placement of specific technology infrastructure, the automated Terminal would have a negative impact on the logistics taking place at the facility, causing loss of time and money.

## Solution

Our team of network and infrastructure professionals interviewed manufacturers and arranged site visits and demonstrations of potential technology options.

The scope of work included network consultation, network design, VoIP implementation, wireless network troubleshooting and analysis, network and systems monitoring, and structured cabling.

Our infrastructure experts helped our client maintain their daily operational activities by supporting multiple applications that made them more efficient.

## Benefit

Our team of network and infrastructure professionals interviewed manufacturers, and arranged site visits and demonstrations of potential technology options.

The scope of our work included network consultation, network design, collaboration tools and solutions, wireless network troubleshooting and analysis, network and systems monitoring, and structured cabling.
